Bilingual (English/French) data analyst with a **Master's in Computer Science** and 2+ years of experience (18 months in the US) building **business intelligence** dashboards and reports on finance, accounting and IT-operations data. Strong in requirements gathering, **stakeholder** management with cross-functional teams and data quality (reconciliation, CMDB cleanup); presents recommendations to leadership. Works in **SQL**, **Power BI** (DAX) and **Excel**; built an Alberta oil and gas data platform on Databricks and dbt.

SKILLS

Analytics & BI	**SQL** (advanced), **Power BI** (DAX), **Excel** (advanced), **Python**, R, statistics & forecasting, data visualization
Data Engineering	**Databricks** (Delta Lake), Spark, **dbt**, ETL/ELT, data modeling (star schema), BigQuery, SQL Server
Data Quality	Data validation, reconciliation, root cause analysis, master data, data governance, **SAP** extracts
Tools	**ServiceNow**, Git/GitHub, GCP, Agile/Scrum, AI-assisted workflows (Claude Code)
Languages	**English** (Fluent), **French** (Native), Spanish (Intermediate)

EXPERIENCE

IT Operations and Training
Alstom (international assignment): Rochester, NY, USA — *Sep 2024 - Feb 2026*

- Oversaw a **200-printer US fleet** and its budget: redesigned its Excel database, built **Power BI** KPIs (vendor invoices, cost per print) and advised IT leadership; first savings realized, **several hundred thousand dollars** projected over several years.
- Managed and cleaned **ServiceNow CMDB** datasets on **500+ network assets** (duplicates, stale records) for infrastructure planning.
- Validated network documentation (topology, IP plans, rack layouts) for **data integrity** before new-site records across the Americas entered production systems.
- Coordinated vendors and internal **stakeholders** on site network and software deployments; resolved end-user tickets in **ServiceNow**.
- Hosted live-streamed IT training for ∼**1,000 users/month** across the Americas, in English and in French for Canada.

Data Administrator: Risk & BI
Groupe Crédit Agricole: Vannes, France — *May 2024 - Aug 2024*

- Designed and monitored **Basel II credit-risk indicators** and KPIs for the regional bank's receivables portfolio in **SQL, Excel, MicroStrategy and SAS**; recovery-team stakeholders used the analyses in their decisions.
- Reconciled risk-management tools with **accounting** practices and resolved discrepancies for **regulatory compliance**.
- Administered risk-management tools for the branch network: built specialized tools, handled incidents with **root cause analysis** and corrective action plans.

Data Analyst
Carrefour Administratif: Mondeville, France — *Feb 2023 - Jul 2023*

- Gathered accounting requirements and built the **EGALIM compliance KPI** tracking multi-million-euro supplier invoices against payment deadlines: **SQL in BigQuery** joining 3 SAP-extract tables with no shared key, REGEX to rebuild missing numbers.
- Delivered a 3-page **Looker Studio** dashboard (overview with invoice aging, invoice detail, worst performers by product line) filterable by business unit, customer and supplier; accounting stakeholders used it to prioritize collections and quantify late-payment penalties.
- Automated data preparation and loads into BigQuery with **Python (pandas)** and **Apps Script**, including a role-based access tool for the team's dashboards; handled 4 KPI and reporting projects in parallel for an Order-to-Cash team (around 25M invoices).

PROJECT

Alberta Energy Operations Intelligence
Personal project: github.com/Nelson-Lefebvre/alberta-energy-bi — *May 2026 - Present*

- Built a data platform on public **Alberta oil and gas data** (Petrinex, AER, WCS prices; 4.34M fact rows): medallion lakehouse on **Databricks** (Delta Lake, Unity Catalog), **dbt** star schema, monthly job deployed as code.
- **Power BI data model** and report with 27 DAX measures and row-level security: production, OPEX/boe (simulated costs), Scope 1 emissions, 6-month forecast.
- Caught two silent data errors that passed every structural test (a gas unit mismatch that put one region's OPEX/boe at $4; 11,943 wells with CO_2 but no production); added **grain-level plausibility tests**.

EDUCATION

M.Sc. Computer Science: Decision-Making, Optimization & AI/Data — *2021 - 2023*
Université de Caen Normandie, France (WES: equivalent to a Canadian Master's degree)

Exchange Year: graduate courses in Artificial Intelligence — *2022*
University of Nebraska at Omaha, USA

B.Sc. Computer Science — *2018 - 2021*
Université de Caen Normandie, France
